PLOTTINGS

Contents

- ❖ Basic Plots
- ❖ Visualizing distributions
- ❖ Detecting Outliers
- ❖ Heatmaps

Plotting

- Plotting means creating visual representations of data to make it easier to observe patterns, trends, and insights.

Why Plotting is Important:

- Makes data easy to understand
- Helps in decision making
- Reveals **hidden patterns, trends, and outliers**
- Makes communication of results more visual and impactful

Plotting in Python:

Libraries

To plot graphs in Python, we mainly use:

1. Matplotlib

- Core plotting library in Python.
- Easy for basic plots.

2. Pandas

- Easier syntax for simple plots using `.plot()`.

3. Seaborn

- Built on Matplotlib, used for statistical and attractive visualizations.
- Includes advanced plots like heatmaps, violin plots, etc.

Unitedworld Institute of Technology

How to Install Plotting Libraries

```
pip install matplotlib seaborn pandas
```

How to Import

```
import pandas as pd
```

```
import matplotlib.pyplot as plt
```

```
import seaborn as sns
```

Note: Use %matplotlib inline if working in Jupyter Notebook to show plots inline.

Unitedworld Institute of Technology

Example :

```
import pandas as pd
```

```
import matplotlib.pyplot as plt
```

```
data = {  
    'Month': ['Jan', 'Feb', 'Mar', 'Apr', 'May'],  
    'Sales': [250, 400, 300, 500, 450],  
    'Profit': [80, 120, 100, 160, 130]  
}
```

```
df = pd.DataFrame(data)
```

```
print (data)
```

```
Print (df)
```

KARNAVATI
UNIVERSITY

Unitedworld Institute of Technology **1. Line Plot**

- A graph that connects data points using a straight line.

- To **show trends over time** (like monthly sales or temperature changes).

Unitedworld Institute of Technology **Code 1: Line Plot**

```
df.plot(x='Month', y='Sales', kind='line',  
marker='o') plt.title("Monthly Sales Line Plot")  
plt.xlabel("Month")  
plt.ylabel("Sales")  
plt.grid(True)  
plt.show()
```

Note: **marker='o' or marker='*' or marker='s'**

The marker is used to highlight individual data points on a line plot.

Unitedworld Institute of Technology

2. Bar Graph

- A chart with rectangular bars representing values of different categories.
- To compare values across different groups/categories.

Unitedworld Institute of Technology

Code 2 : Bar Graph

```
df.plot(x='Month', y='Sales', kind='bar',  
color='skyblue') plt.title("Sales Bar Chart")
```

```
plt.xlabel("Month")  
plt.ylabel("Sales")  
plt.show()
```

KARNAVATI
UNIVERSITY

Unitedworld Institute of Technology

3. Pie Chart

- A circular chart divided into slices to illustrate parts of a whole.
- To show proportions or percentage share (like % of total sales by month).

KARNAVATI
UNIVERSITY

Unitedworld Institute of Technology

Code 3 : Pie Chart

```
plt.pie(df['Sales'], labels=df['Month'],
```

```
autopct='%1.1f%%') plt.title("Sales Share by Month")  
plt.show()
```

NOTE:

(1) **autopct = “auto percentage”**

It is used to display the percentage value on each slice of the pie chart.

(2)

Parameter	
-----------	--

%1.1f%%	1 decimal place floating percent sign
%1.2f%%	2 decimal place

- A graph with points plotted on X and Y axes to show

relationships.

- To visualize the correlation or relationship between two numeric variables.

Unitedworld Institute of Technology

Code 4 : Scatter Plot

```
df.plot(kind='scatter', x='Sales', y='Profit',  
color='red') plt.title("Sales vs Profit")  
plt.xlabel("Sales")  
plt.ylabel("Profit")  
plt.show()
```

Unitedworld Institute of Technology

5. Histogram

- A histogram is a type of bar chart that represents the frequency distribution of numerical data by grouping values into intervals or bins.

Useful for:

To understand the distribution (normal, skewed, uniform, etc.)

To find data spread, central values, or gaps

To detect peaks or skewness

Unitedworld Institute of Technology **Code 5 : Histogram**

```
import pandas as pd  
import matplotlib.pyplot as plt
```

```
data = {'Marks': [23, 45, 55, 60, 67, 67, 70, 72, 75, 78, 80, 85, 85, 90, 95, 100]} df = pd.DataFrame(data)
```

```
plt.figure(figsize=(8,5))
```

```
plt.hist(df['Marks'], bins=5, color='skyblue', edgecolor='black')
```

```
plt.title('Histogram of Marks')
```

```
plt.xlabel('Marks Range')
```

```
plt.ylabel('Frequency')
```

```
plt.grid(True)
```

```
plt.show()
```

Unitedworld Institute of Technology **6. Box Plot**

Code 6.

```
import seaborn as sns
```

```
import matplotlib.pyplot as plt
```

```
data = sns.load_dataset("tips")
sns.boxplot(x=data["total_bill"])
plt.title("Box-and-Whisker Plot")
plt.show()
```

Unitedworld Institute of Technology **Code 7**: Experience of 10 teachers
are 3,3,7,8,8,10,11,12,15,18

```
import matplotlib.pyplot as plt
import seaborn as sns
```

```
teaching_years = [3, 3, 7, 8, 8, 10, 11, 12, 15, 18]
```

```
sns.boxplot(data=teaching_years)
plt.title("Box Plot of Teaching Experience (Years)")
plt.xlabel("Teaching Experience")
plt.show()
```

Unitedworld Institute of Technology

Code 8 : Orientation

```
import matplotlib.pyplot as plt
import seaborn as sns
```

```
teaching_years = [3, 3, 7, 8, 8, 10, 11, 12, 15, 18]
```

```
sns.boxplot(data=teaching_years, orient='h')  
plt.title("Box Plot of Teaching Experience (Years)")  
plt.xlabel("Teaching Experience")  
plt.show()
```

Unitedworld Institute of Technology

Code 9:

```
import seaborn as sns  
import matplotlib.pyplot as plt  
import pandas as pd  
  
data = pd.DataFrame({  
    'Experience': [3, 3, 7, 8, 8, 10, 11, 12, 15, 18],  
    'Department': ['CS', 'Math', 'CS', 'Physics', 'CS', 'Math', 'Math', 'Physics',
```

```
'CS', 'Math']
```

```
})
```

```
sns.boxplot(x='Department', y='Experience', hue='Department',  
data=data) plt.show()
```
